

05

UI/UX Design System

Page inventory as built, design tokens for light, dark and high-contrast modes, component rules, content and trust-copy guidelines, accessibility to WCAG 2.2 AA, and the prompt template for AI design tools.

Revision	Rev 2.0 — 1 October 2026
Supersedes	Page List & Design Guide (Low-Fidelity → High-Fidelity)
Stack baseline	React + Firebase Spark (Auth, Firestore, Hosting) + Cloudinary Free + Vercel Hobby API + GitHub Actions. No paid plan, no credit card.
Audience	Everyone building or reviewing screens; AI design/code tools
Team	Andresa (Scrum Master) · Carillo · Laurente · Prades · Solpico

READ THIS FIRST

The low-fidelity wireframing phase is over, so this revision documents the product that actually exists. The page list now includes My Activity, Notifications, Settings, legal pages and admin bank operations. Saved Searches is retired. The color system had a real accessibility bug: the original green (#16A34A) and amber (#D97706) fail WCAG AA as text on white (3.3:1 and 3.2:1). Rev 2 keeps them for fills and icons, and adds darker text shades that pass. It also defines dark and high-contrast tokens, badge rules for the new listing states (purpose, changes requested, fairness labels), and copy rules so the interface never over-claims what "Verified" means.

Document set: 01 Product Requirements & Scope · 02 System Architecture & Data Design · 03 Infrastructure, Setup & Deployment · 04 Security & Privacy · **05 UI/UX Design System** · 06 Roadmap & Release Plan · 07 QA & Testing Strategy

1. Platform rules

- **Responsive web app (React).** User pages are designed **mobile-portrait first** (390 px canvas). Admin pages are **desktop-landscape** (1280 px canvas) with a persistent sidebar.
- One account type for renters and owners. The admin is a separate route tree (`/admin/*`) with its own layout.
- Every route is lazy-loaded and shows an accessible loading fallback. A runtime error shows a recovery screen with **Reload**.

2. Page inventory (as built, Oct 2026)

2.1 User pages (mobile-first)

#	Page	Purpose	Key UX requirement
U1	Home	Hero + search, how TrustHome works, live verified listings only	No sample/fake cards (removed Sept)
U2	Browse	Filter by city, price, type, purpose ; sort by trust score	Empty state with "clear filters"; purpose chips visible on cards
U3	Listing detail	Photos, Verified badge, trust score + cue, fairness label, approximate map, reviews, price with period	Badge + score above the fold; Request Booking is the dominant action (rent only)
U4	Booking request	Dates/time, showing windows, live overlap hint	Disable submit with a reason until valid
U5	My Activity	Tabs: My Listings · My Bookings · Booking Requests ; tab in URL	One menu entry replaces three; old routes still work
U6	Create / Edit listing	Steps: Purpose → Details → Photos → Documents → Showing windows → Map → Review	Progress indicator; local previews; consent text on documents step
U7	Raise a dispute	Reason + evidence description, tied to one booking	Explain what happens next and how long it takes
U8	Notifications	Inbox: open → navigates + marks read; Clear, Clear read	Unread count consistent with the bell
U9	Settings	Appearance (System/Light/Dark), Larger text, High contrast, Reduce motion	Persisted; switches visible in dark mode
U10	Account / Profile	Edit name; public profile with trust signals and founded-dispute flag	Never show email publicly
U11	Owner dashboard	Listings, pending requests, confirmed, completed stays	Load failures shown as "unavailable", not 0
U12	Bank catalog + property detail	Metrobank ROPA list with "Last verified"; loan calculator	Clear "public listing, not a partnership" note
U13	Login / Register	Email/password + Google; no role picker	Inline field errors; suspended-account screen
U14	Legal pages	Privacy Policy, Terms of Use, Data & Compliance, IP Infringement Reports	Linked from footer and the upload consent text

#	Page	Purpose	Key UX requirement
—	Saved Searches	Retired. <code>/saved-searches</code> redirects to Browse	—

2.2 Admin pages (desktop)

#	Page	Purpose	Key UX requirement
A1	Admin dashboard	Pending listings, open disputes, recent activity	Retry on load error
A2	Listing review	Photos + private document previews next to account name; Approve / Request changes / Reject + note	Review checklist (04 §5.3) beside the documents
A3	Disputes	Founded / Dismissed + notes; booking timeline	Same action placement as A2
A4	Users	Suspend / reinstate	Danger button + confirmation dialog
A5	Notifications	Admin feed: disputes + new listing submissions	Each item links to the review item
A6	Bank catalog & scraper jobs	Last run per bank, queue a job, scrape log	Explain that a queued job needs the worker to run

3. Design tokens

3.1 Typography

Inter (Google Fonts), fallback `Inter, system-ui, "Segoe UI", Roboto, sans-serif`. Use `rem` units so **Larger text** can scale the root (`html { font-size: 112.5% }`).

Token	Size / line-height	Weight	Use
<code>--text-h1</code>	2rem / 1.2 (mobile 1.75rem)	700	Page title
<code>--text-h2</code>	1.5rem / 1.25	700	Section
<code>--text-h3</code>	1.25rem / 1.3	600	Card title
<code>--text-h4</code>	1rem / 1.4	600	Label heading
<code>--text-body</code>	1rem (16 px) / 1.5	400	Body text. Raised from 14 px: mobile readability, and prevents iOS zoom on input focus
<code>--text-small</code>	0.875rem / 1.45	400	Meta, captions
<code>--text-button</code>	0.9375rem / 1	600	Buttons

3.2 Color: light theme

Token	Hex	Use	Contrast
<code>--primary</code>	 <code>#2563EB</code>	Primary buttons, links, focus ring	5.2:1 on white ✓
<code>--primary-strong</code>	 <code>#1E40AF</code>	Hover/pressed	8.7:1 ✓
<code>--primary-soft</code>	 <code>#DBEAFE</code>	Selected filters, info backgrounds	text <code>#1E40AF</code> on it: 7.2:1 ✓

Token	Hex	Use	Contrast
<code>--success</code> (fill/icon)	 <code>#16A34A</code>	Badge dot, icons, solid buttons with white text ≥ 18.66 px bold	3.3:1: not for text ×
<code>--success-text</code>	 <code>#15803D</code>	Verified / Confirmed / Completed text	5.0:1 on white; 4.6:1 on <code>#DCFCE7</code> ✓
<code>--warning</code> (fill/icon)	 <code>#D97706</code>	Dots, icons	3.2:1: not for text ×
<code>--warning-text</code>	 <code>#B45309</code>	Pending / Changes requested text	5.0:1 on white; 4.5:1 on <code>#FEF3C7</code> ✓
<code>--danger</code>	 <code>#DC2626</code>	Destructive buttons, error text	4.8:1 ✓
<code>--danger-text</code> (on soft)	 <code>#B91C1C</code>	Disputed / Rejected badges on <code>#FEE2E2</code>	5.3:1 ✓
<code>--text</code>	 <code>#111827</code>	Primary text	17:1 ✓
<code>--text-muted</code>	 <code>#4B5563</code>	Secondary text	7.2:1 ✓
<code>--border</code>	 <code>#E5E7EB</code>	Dividers (decorative)	Inputs need $\geq 3:1$: use <code>#6B7280</code> (4.8:1) for input borders
<code>--bg</code> / <code>--surface</code>	<code>#F9FAFB</code> / <code>#FFFFFF</code>	Page / cards	—

WATCH OUT · Fix in code: search the CSS for `#16A34A` and `#D97706` used as `color:` on text and replace them with `--success-text` / `--warning-text`. The original guide claimed the palette passed AA. For these two colors as text, it does not. That is exactly the kind of detail an accessibility-minded panelist checks.

3.3 Color: dark theme (`[data-theme="dark"]` or system preference)

Token	Hex	Contrast
<code>--bg</code> / <code>--surface</code>	<code>#0B1220</code> / <code>#111827</code>	—
<code>--text</code> / <code>--text-muted</code>	<code>#F3F4F6</code> / <code>#9CA3AF</code>	17:1 / 7.0:1 on surface ✓
<code>--primary</code>	<code>#60A5FA</code> (button text <code>#0B1220</code>)	7.0:1 / 7.4:1 ✓
<code>--success-text</code> / soft bg	<code>#86EFAC</code> on <code>#052E16</code>	10.6:1 ✓
<code>--warning-text</code> / soft bg	<code>#FCD34D</code> on <code>#451A03</code>	10.4:1 ✓
<code>--danger-text</code> / soft bg	<code>#FCA5A5</code> on <code>#450A0A</code>	8.5:1 ✓
<code>--border</code> (decorative) / input border	<code>#374151</code> / <code>#6B7280</code>	1.7:1 decorative / 3.7:1 for inputs ✓

High contrast mode overrides: text `#000` / `#FFF`, borders 2 px solid `currentColor`, no soft backgrounds behind status text, underlined links, focus ring 3 px.

```
:root{--primary:#2563EB;--success-text:#15803D;--warning-text:#B45309;--danger:#DC2626;--text:#111827;--bg:#F9FAFB;/* ... */}
:root[data-theme="dark"]{--primary:#60A5FA;--text:#F3F4F6;--bg:#0B1220;/* ... */}
@media (prefers-color-scheme: dark){:root:not([data-theme="light"]){/* same as dark */}}
@media (prefers-reduced-motion: reduce){*{animation-duration:.01ms!important;transition-duration:.01ms!important;scroll-behavior:auto!important}}
:root[data-motion="reduce"] *{animation:none!important;transition:none!important}
```

3.4 Spacing, radius, elevation

- Spacing: 4 px scale: **4 · 8 · 12 · 16 · 24 · 32 · 48 · 64**. Card padding 16, card gap 16 (mobile) / 24 (desktop), section gap 48.
- Radius: buttons and cards 8 · inputs 6 · badges 999 · modals 12.
- Elevation: cards `0 1px 3px rgba(0,0,0,.1)` ; modals `0 10px 30px rgba(0,0,0,.2)` ; in dark mode use a 1 px border instead of a shadow.
- Breakpoints: mobile ≤ 599 · tablet 600–1023 · desktop ≥ 1024.

4. Component rules

4.1 Status badges: always text + color + (optional) icon

Badge	Style	When
● Verified – document reviewed	success-text on success-soft + check icon	Listing approved
● Pending review	warning-text on warning-soft	Listing submitted
● Changes requested	warning-text on warning-soft + pencil icon	Admin asked for edits
● Rejected	danger-text on danger-soft	Final rejection
● Pending / Confirmed / Completed / Disputed	warning / primary / success / danger	Booking status
For rent · Nightly / For rent · Monthly / For sale	neutral outline chip	Listing purpose (not a trust signal, so neutral color)
Above / At / Below market · Insufficient data	neutral chip + arrow icon	Fairness label. Do not color "Above market" red: it is information, not a violation
▲ N founded dispute(s)	danger-text with icon	Public profile and listing owner line

4.2 Buttons

Primary (filled), Secondary (outline), Tertiary (text), Danger (filled red, destructive only). Every button has default, hover, **focus-visible**, active, **disabled with a reason**, and **loading** (spinner + "Confirming...") states. Minimum target **44×44 px** on mobile (WCAG 2.2 AA requires at least 24×24 px; 44 is our standard).

4.3 Forms

- Label above the field, helper text below, error text below in danger color with an icon. Errors are announced with `aria-describedby` + `aria-invalid`.

- Validate on blur and on submit, not on every keystroke. Focus the first invalid field on submit.
- Word counter on Description: "142 / 400 words · 150+ recommended".
- File inputs: show local previews (image thumbnail or PDF name + size). Explain the limits *before* upload ("JPG, PNG or PDF, up to 10 MB").
- **Documents step consent:** "We use these documents only to check that you control this property. Only you and TrustHome reviewers can see them. Links expire after a few minutes. See our Privacy Policy." Plus a required checkbox.

4.4 Feedback, empty, error and offline states

Situation	Pattern	Example copy
Action in progress	Button loading state; disable double-submit	"Confirming..."
Success	Toast (polite live region), 4 s, plus state change on page	"Booking confirmed. The renter has been notified."
Conflict (409)	Inline alert near the action, no toast	"These dates were just confirmed for another renter. This request stays pending."
API unavailable	Inline alert + Retry; never fall back to unsafe behavior	"Booking service is temporarily unavailable. Try again in a minute."
Empty list	Illustration-free: one sentence + next step	"No booking requests yet. Share your listing to get started."
Load failed	"Couldn't load" + Retry (never show 0)	"Couldn't load request counts. Retry"
Private map	Caption under the map	"Approximate area. Exact address is shared after a booking is confirmed."

4.5 Listing card (mobile)

Image 4:3 with lazy-loading and `f_auto,q_auto,w_600` Cloudinary transformation → title (2 lines max) → price + period ("₱18,000 /month", "₱2,500 /night", "₱4.2M asking") → city + purpose chip → **Verified badge + trust score with cue** ("4.6 · Highly rated" / "New listing") on the first visible line under the image.

5. Content and trust copy

- Say exactly what verification means: **"Verified – document reviewed"**. Never write "100% safe", "guaranteed", "legally verified" or "fraud-proof".
- Name the next step on every screen ("Log your deposit reference", "Rate your stay").
- Use plain English with Filipino market terms people use (GCash, barangay, "per month"). Use peso formatting `₱18,000` (no decimals). Show dates as "Mon, 6 Oct 2026", in Asia/Manila time.
- Error messages explain what happened and what to do. They never blame the user or show codes alone.
- The bank catalog always shows: "Public Metrobank listing · Last verified 1 Oct 2026 · TrustHome is not affiliated with the bank."

6. Accessibility: WCAG 2.2 AA checklist

Area	Requirement	How to check
Contrast	Text 4.5:1 (large 3:1); UI components and focus ring 3:1	Token table above; axe DevTools
Color alone	Status always has text (and ideally an icon)	Grayscale screenshot test
Keyboard	Everything reachable and operable; logical order; no traps (modals return focus)	Unplug the mouse for one full flow
Focus visible	2 px <code>--primary</code> outline + 2 px offset; not hidden behind sticky headers (2.4.11)	Tab through Browse with the sticky nav
Target size	≥ 24×24 px (2.5.8); our standard 44×44	Inspect icon buttons (bell, clear, map controls)
Dragging	Map pin can be placed by search or tap , not only drag (2.5.7)	Keyboard-only pin placement
Forms	Labels, errors linked, no CAPTCHA puzzles for login (3.3.8)	Screen reader pass (NVDA / VoiceOver)
Images	Alt text describes the property ("Living room with two windows"), not file names; decorative images <code>alt=""</code>	Review the create-listing flow
Motion	Respect <code>prefers-reduced-motion</code> and the Reduce motion setting	Toggle both
Zoom	Usable at 200% zoom and with Larger text, no horizontal scroll at 320 px	Chrome zoom
Language	<code><html lang="en"></code> (set <code>lang="fil"</code> on any Filipino passages)	View source

7. Using AI design and code tools

Include these five things in every prompt so the output matches the system:

1. **Page** from §2 and its one-line purpose.
2. **Platform**: "mobile-portrait 390 px" or "desktop admin 1280 px with sidebar".
3. **Tokens**: paste §3.1–3.4 (or the CSS variables file).
4. **Key UX requirement** from the page table, plus the relevant state patterns from §4.4.
5. **Constraints**: "Use existing components (Button, Badge, Card, Field). WCAG 2.2 AA. No new colors. No placeholder Lorem Ipsum. Realistic PH data."

Template: "Build the **[Listing detail]** page for TrustHome PH, a verified rental marketplace in the Philippines. **Mobile-portrait, 390 px**. Use these tokens: [paste]. Requirements: the Verified badge and trust score with cue are visible above the fold; **Request Booking** is the most prominent action and is hidden for sale listings; the map shows an approximate area with the privacy caption; include loading, empty-reviews and error states. Use existing components only, WCAG 2.2 AA, realistic Philippine sample data (₱, Quezon City)."

BEST PRACTICE · Review AI output against this document **before** merging: tokens used (no raw hex), every state present, keyboard path works, no new dependencies. A consistent product looks more trustworthy than a pretty but inconsistent one, and trust is what TrustHome sells.
