

TrustHome PH

Build Instructions — Listing, Verification & Booking Modules

For AI / Development Team

This document translates the TrustHome PH proposal into concrete implementation requirements. It prioritizes **what the user must submit**, the verification flow, listing creation, and the booking/accountability system. Use this as the single source of truth when building these modules.

1. Product Scope (Relevant Modules)

Focus only on the rental marketplace side for MVP. The bank-acquired catalog is secondary and out of scope for this instruction set.

- **Verified listing intake** — owner submits property + ownership documents
- **Document-plausibility review** — team marks listing “Verified – document reviewed”
- **Conflict-free booking calendar** — status workflow + automatic overlap blocking
- **Deposit accountability trail** — renter logs transaction reference; dispute flag system
- **Trust & Fairness Score** — ranking based on completed bookings, ratings, price fairness

2. Landlord / Owner — What They Must Submit

2.1 Required Fields to Create a Listing

These fields are mandatory before a listing can be submitted for review.

Field	Type	Required	Notes
Property type	Select	Yes	Room / Studio / Apartment / House / Condo
Address / Area	Text + City/Barangay	Yes	Exact address can be hidden until Confirmed booking
Bedrooms / Bathrooms	Number	Yes	
Size (sqm)	Number	Yes	Used for price-fairness calculation
Monthly rent (PHP)	Number	Yes	
Availability date	Date	Yes	
Amenities	Multi-select	Yes	e.g. parking, WiFi, furnished, pets allowed
Photos	Image upload (min 4–6)	Yes	Enforce minimum count; recommend 8–15+
Description	Text (150–400 words)	Yes	Encourage specific, factual language
Showing windows	Days + time ranges	Yes	Used by conflict-detection engine

2.2 Documents Required for “Verified – document reviewed”

The proposal requires an ownership/ID document + government photo ID. The review is a **document-plausibility check** (name match + document validity), **not** a full Registry of Deeds title search. State this limitation clearly in the UI and to the panel.

Priority	Document	Purpose
Primary	Title / Deed / Transfer Certificate of Title (TCT) or Land Registry equivalent	Strongest proof of ownership
Primary	Recent Property Tax Bill / Tax Receipt / Assessment Notice	Shows the person is the recorded taxpayer
Supporting	Mortgage statement	Shows borrower on the property
Supporting	Homeowners insurance policy (declarations page)	Name + address match
Always required	Government-issued photo ID (Passport, Driver's License, PhilID / National ID)	Name must match the ownership document

Implementation note: Accept any one primary document + photo ID. Store securely. Do not display the ownership document publicly. Only show the badge “Verified – document reviewed”.

2.3 Owner Flow (Step-by-Step)

1. Register account (email/phone + basic profile).
2. Create listing → fill required fields + upload photos.
3. Upload ownership document + government photo ID.
4. Submit for review → status becomes “Pending Review”.
5. Team reviews (name match + document validity) → mark “Verified – document reviewed” or request resubmission.
6. Owner sets showing availability windows.
7. Listing goes live and appears in search (ranked by Trust & Fairness Score once bookings exist).
8. Receive booking requests → Confirm or Decline.
9. Receive deposit directly from renter (GCash / bank transfer).
10. After viewing / move-in → mark booking Completed (or face Dispute risk).

3. Renter / Buyer — What They Do

3.1 Booking Request Flow

1. Browse Verified listings (default sort = Trust & Fairness Score).
2. Open listing → Request Viewing / Book Tour.
3. Select preferred date/time (or propose times).
4. System runs **conflict-detection**: checks requested range against every Confirmed booking on that listing and blocks overlaps automatically.
5. Booking status starts as **Pending**.
6. Owner Confirms → status becomes **Confirmed**. Calendar invite + reminders sent.

3.2 After Confirmation (Accountability Trail)

Deposits are paid **directly** between renter and owner. TrustHome does **not** custody funds.

- Renter pays via GCash / bank transfer.
- Renter **logs the transaction reference** against the Confirmed booking record inside the platform.
- This creates the verifiable accountability trail.

3.3 Dispute Mechanism

- If owner fails to honor a Confirmed booking, renter raises a **Dispute**.
- A founded dispute permanently suspends the listing/account and leaves a visible warning flag on the profile.
- Only bookings that reach **Completed** status count toward the Trust Score (anti-gaming rule).

3.4 Optional Paid Feature (Renter)

- Small subscription for saved-search alerts (instant notification when a new Verified listing matches budget, location, type).

4. Booking Status Workflow (Must Implement Exactly)

Every booking must move through this explicit state machine. No other statuses are allowed in MVP.

Status	Who can change	Rules / Side effects
Pending	System (on request)	Created when renter requests a viewing. Awaits owner action.
Confirmed	Owner	Owner accepts. Calendar blocks the slot. Conflict engine now treats this range as taken. Renter can log deposit reference.
Completed	Owner or Renter (or auto after date)	Only Completed bookings count toward Trust Score. Triggers rating prompt.
Disputed	Renter	Raised against a Confirmed booking. Triggers review. Founded dispute → permanent flag + suspension.

Conflict-detection rule: On every new request, the system must check the requested date range against **all Confirmed** bookings on that listing and automatically reject/block overlaps. This is a real algorithm, not a static calendar field.

5. Trust & Fairness Score (Computational Core)

Ranking is a weighted score, not a raw list ordered by recency or price.

- **Completed-booking count** (higher weight for recent bookings)
- **Average rating** (renter ↔ owner)
- **Price-fairness delta** — compare listing's price per sqm against median of comparable listings (same area, type, size band). Flag "above market" / "below market".
- **Anti-gaming:** Only Completed bookings count. Detect repeated self-booking patterns (same account/device) and flag for manual review before they can inflate the score.

6. Recommended Build Priority for Team / AI

Build in this order so the core value (verified + bookable + accountable) is demonstrable early.

#	Module	Why first
1	User accounts + role (Owner / Renter)	Foundation for everything else
2	Listing creation form + photo upload	Core supply side
3	Document upload + verification status + badge	"Verified – document reviewed" is the key differentiator
4	Showing availability windows	Required input for conflict engine
5	Booking request + status state machine	Pending → Confirmed → Completed → Disputed
6	Conflict-detection algorithm	Automatic overlap blocking on Confirmed ranges
7	Transaction reference logging	Accountability trail without holding funds
8	Dispute flow + permanent flag/suspension	Consequence system for bad actors
9	Trust & Fairness Score + ranking	Surfaces trustworthy listings first
10	Owner dashboard (views, inquiries, bookings)	Retention & monetization readiness

7. Explicit Limitations (State These Honestly)

The proposal is deliberately scoped. Do not over-claim in UI copy or panel answers.

- Document review is **plausibility only** (name match + validity). It is **not** a legal title search against the Registry of Deeds.
- TrustHome **does not custody deposits**. Money moves peer-to-peer. The platform only provides the accountability trail and consequence system.
- Bank-acquired catalog is a secondary, curated public scrape with a visible "Last verified" timestamp — not a partnership.
- Seeded listings for demo are a marketing tactic, not a structural dependency.

8. Quick Reference — Minimum Viable User Submissions

Owner (to go live as Verified)

1. Property details + photos
2. One ownership document (Title/Deed or Property Tax Bill preferred)
3. Government photo ID matching the ownership document name
4. Showing availability windows

Renter (to complete a booking with accountability)

1. Select date/time for viewing
 2. After Confirmed → pay deposit directly to owner
 3. Log transaction reference against the booking
 4. After viewing → mark Completed or raise Dispute
