TrustHome PH

UI/UX Design System & Page Inventory

The current page inventory, design tokens for light and dark themes, components, copy rules and accessibility standards for TrustHome PH.

Document	TH-07 · UI/UX Design System & Page Inventory
Version / date	Rev. 2.0 · 4 October 2026
Factual baseline	TrustHome_Current_Progress_Report_2026-10-04.md (PR #42 `fixes` working copy, based on `features/v1-3-navigation-settings`; excludes `dev`)
Replaces	Design Guide
Audience	Team Idle developers, Scrum Master, QA, panel/adviser reviewers, and AI coding assistants used by the team

Evidence label	Meaning (never use these interchangeably)
[Implemented in source]	Code exists in the repository working copy. Not proof that it runs in production.
[Unit/emulator tested]	Covered by automated unit tests or the Firestore emulator suite.
[Reported working]	A team member observed it working in the browser against the test project.
[Deployed/live verified]	Deployed to trusthome-ph and confirmed working there.
[Known gap]	Does not yet meet the product claim. Do not present it as working.
[Roadmap] / **[Proposed]**	Planned future work / a recommendation in this document, not yet built.

2. Page Inventory (current routes) . . . 4
2.1 Public and user pages — mobile-portrait first . . . 4
2.2 Admin pages — desktop-landscape, sidebar layout . . . 5
3. Design Tokens . . . 5
3.1 Typography . . . 5
3.2 Color — light theme . . . 6
3.3 Color — dark theme (Settings → Dark / System) . . . 6
3.4 Spacing, radius, elevation . . . 7
4. Components . . . 8
5. UX Patterns and Copy . . . 9
6. Accessibility (WCAG 2.2 AA target) . . . 9
7. Designing New Pages . . . 10

1. Design Principles

1. **Trust is visible.** Verified badge, trust score and fairness label appear on every listing card and above the fold on listing detail.
2. **Honest by design.** Limits are stated where the user acts: “document-plausibility review”, “estimate only”, “TrustHome does not hold deposits”.
3. **Mobile-first for users, desktop for admins.** User pages target a 390 px canvas; admin pages target 1280 px+ with a persistent sidebar.
4. **Status is never color-only.** Every status uses color + text label (+ icon where helpful).
5. **Every action gives feedback.** Loading, success, error-with-retry and empty states are designed, not left to chance.
6. **Consistency over creativity.** The same action looks and sits the same on every screen (Approve on the listing queue = Approve on the dispute queue).

> **NOTE · Source of truth for visual values**
> The tokens below are the team standard. If the implemented CSS differs, decide which is correct, update the other, and record the decision here. Do not let each page invent its own color or spacing.

2. Page Inventory (current routes)

2.1 Public and user pages — mobile-portrait first

#	Page	Route	Purpose and key UX requirement
U1	Home	`/`	Hero + search, how TrustHome works, featured **live verified** listings (no sample cards)
U2	Browse	`/browse`	Filters (purpose, city, price, type, details), default trust sort, result count, empty state
U3	Listing detail	`/listings/:id`	Photos, Verified badge, trust score + cue, fairness label, approximate map (hidden if no pin), reviews; **Request Booking** dominant for rentals; no booking CTA for sale listings
U4	Booking request	`/listings/:id/book`	Date range picker; button disabled with reason until dates valid
U5	My Bookings	`/my-bookings`	Status chips; deposit reference field (Confirmed only); Mark completed; Rate; Raise dispute
U6	Booking requests / Manage	`/booking-requests`, `/manage-bookings`	Request list, availability grid, Approve / Decline (owner)
U7	Rate booking	`/bookings/:id/review`	1–5 stars + comment
U8	Raise dispute	`/bookings/:id/dispute`	Reason (required) + evidence description; consequences explained
U9	Create listing	`/listings/new`	Multi-step: details → photos (≥4) → documents → showing windows → map → review; progress indicator; data kept between steps
U10	Edit listing	`/listings/:id/edit`	Same validation as create; shows review note when changes requested
U11	My Listings	`/my-listings`	Card: photo, city, type, bedrooms, price, status chip, review note, pending-request count
U12	My Activity	`/my-activity`	Tabs: Listings · Bookings · Booking requests (tab in URL)
U13	My Dashboard	`/dashboard`	Owner metrics, recent activity, CTA for new users
U14	Notifications	`/notifications`	List, unread state, mark one/all read, empty state; bell with unread count in nav
U15	Bank catalog	`/bank-catalog`	Filters, sort, pagination, count, “last seen”, image fallback
U16	Bank property detail	`/bank-catalog/:id`	Source details + link; loan estimate with disclaimer
U17	Public profile	`/profiles/:id`	Name, ratings, listings, founded-dispute count (only if > 0)
U18	Login / Register	`/login`	Email + Google; no role picker
U19	Account	`/account`	Profile fields; role/status read-only
U20	Settings	`/settings`	Appearance (System/Light/Dark), Larger text, High contrast, Reduce motion
U21	Legal	`/legal/:documentId`	Terms, privacy, disclaimers; readable line length
—	Saved searches	`/saved-searches`	Retired: redirects to Browse; remove from all menus

2.2 Admin pages — desktop-landscape, sidebar layout

#	Page	Route	Purpose and key UX requirement
A1	Admin dashboard	`/admin`	Pending listings, open disputes, recent activity; error + Retry
A2	Listing review queue	`/admin/listings`	Documents side-by-side with account name; Download link; Approve / Request changes / Reject with note; plausibility checklist
A3	Dispute queue	`/admin/disputes`	Booking, parties, reason, deposit ref; Founded / Dismissed with notes; consequence summary before confirm
A4	User management	`/admin/users`	Search, role/status, Suspend (danger + confirm) / Reinstate
A5	Admin notifications	`/admin/notifications`	Listing submissions and disputes only
A6	Bank catalog jobs	`/admin/bank-catalog`	Queue refresh; show job state honestly (queued ≠ done); last run per bank
A7	Admin settings	`/admin/settings`	Same appearance/accessibility controls in admin layout

3. Design Tokens

3.1 Typography

Primary typeface **Inter** (fallback: `Inter, system-ui, "Segoe UI", Roboto, sans-serif`). Use `rem` units so the “Larger text” setting scales everything.

Token	Size	Weight	Line height	Use
display / H1	32 px (2rem)	700	1.2	Page title (one per page)
H2	24 px	700	1.25	Section heading
H3	20 px	600	1.3	Card / subsection title
H4	16 px	600	1.4	Small heading, field group
body	16 px on mobile, 14–15 px on admin tables	400	1.5	Paragraphs, inputs (16 px inputs avoid iOS zoom)
caption	12–13 px	400	1.4	Meta text, helper text
button	14–16 px	500/600	1	Labels in sentence case

3.2 Color — light theme

Token	Hex	Contrast on white	Use
primary	#2563EB	5.2:1	Primary buttons, links, active nav, focus ring
primary-strong	#1E40AF	8.7:1	Hover/pressed
primary-soft	#DBEAFE	bg only	Selected filters, highlights
success (fill/icon)	#16A34A	3.3:1	Badge fills, icons, large text only
success-text	#15803D	5.0:1	**Text** for Verified / Confirmed / Completed
warning (fill/icon)	#D97706	3.2:1	Badge fills, icons only
warning-text	#B45309	5.0:1	**Text** for Pending
danger	#DC2626	4.8:1	Disputed, Rejected, destructive buttons
danger-strong	#B91C1C	6.5:1	Danger hover, error text on tinted backgrounds
text	#111827	17.7:1	Primary text
text-muted	#4B5563	7.6:1	Secondary text, captions
border	#E5E7EB	—	Dividers, input borders (use #9CA3AF or darker for input outlines that must be seen: 3:1 non-text)
bg	#F9FAFB	—	Page background
surface	#FFFFFF	—	Cards, modals

> **CAUTION · Correction to the September guide**
> The old guide stated the whole palette passes WCAG AA on white. It does not: green #16A34A (3.3:1) and amber #D97706 (3.2:1) fail for normal-size text. Use them for fills and icons only, and use the `-text` tokens (#15803D, #B45309) for any status wording.

3.3 Color — dark theme (Settings → Dark / System)

Token	Hex	Contrast on #0B1220	Use
bg	#0B1220	—	Page background
surface	#111827	—	Cards, sidebar
text	#F9FAFB	17.9:1	Primary text
text-muted	#9CA3AF	7.4:1	Secondary text
primary	#60A5FA	7.4:1	Links, focus ring, primary button fill with dark text
success	#4ADE80	10.7:1	Verified / Confirmed / Completed
warning	#FBBF24	11.2:1	Pending
danger	#F87171	6.8:1	Disputed / Rejected / destructive
border	#374151	—	Dividers; switch tracks need ≥3:1 against surface

High-contrast mode raises borders to text-muted, removes subtle shadows in favour of 1–2 px outlines, and uses the `-strong` variants. Reduce-motion disables non-essential transitions and honours `prefers-reduced-motion`.

3.4 Spacing, radius, elevation

Token family	Values	Rule
Spacing (4 px scale)	4 · 8 · 12 · 16 · 24 · 32 · 48 · 64	Card padding 16; gap between cards 16–24; section spacing 48; mobile side gutter 16
Radius	inputs 6 · buttons/cards 8 · modals 12 · pills 999	Never mix radii within one component
Elevation	card `0 1px 3px rgba(0,0,0,.10)`; modal `0 10px 30px rgba(0,0,0,.20)`	Dark theme: use borders instead of shadows
Layout	Mobile single column; desktop 12-col, 24 px gutters, max content 1200 px	Admin: 240 px sidebar + fluid content
Breakpoints	mobile ≤ 599 · tablet 600–1023 · desktop ≥ 1024	Design user pages at 390, admin at 1280; must not break at 360 or 768

4. Components

Component	Specification	States to design
Button	Primary (filled), Secondary (outline), Tertiary (text), Danger (filled red, destructive only). Min height 44 px on mobile. Sentence-case verb labels (“Approve listing”)	default, hover, focus-visible, pressed, loading (spinner + keeps width), disabled (with reason nearby)
Status chip	● + label, pill radius. Verification: Pending review / Verified – document reviewed / Changes requested / Rejected. Booking: Pending / Confirmed / Completed / Disputed. Dispute: Open / Founded / Dismissed. Purpose: For rent / For sale (neutral color)	Light, dark, high contrast
Listing card	4:3 image, title, city, price + period, purpose chip, Verified badge, trust score with cue, fairness label	loading skeleton, no image fallback, long title (2-line clamp)
Trust display	Score on 5-point scale + cue (“4.6 · Highly rated”), info tooltip explaining the 40/40/20 formula and “Score updated <date>”	no data (“New listing — not enough history yet”)
Fairness label	Above market / At market / Below market / Insufficient data with neutral wording	—
Form field	Label above, helper text, inline error below in danger text with icon, `aria-describedby` linking them; required marked in text	default, focus (2 px primary ring), error, disabled, read-only
File upload	Drop zone + button, accepted types and size shown, per-file progress, thumbnail, remove, retry on failure; counts “3 of 4 photos minimum”	uploading, failed, complete
Availability grid	Day numbers; confirmed ranges blocked with pattern + label, not color alone; selected range highlighted	conflict message
Map	Approximate area circle/cell, caption “Approximate location — exact address shared after confirmation”, attribution	no pin (section hidden)
Notification bell	Badge with unread count (cap “9+”), accessible name “Notifications, 3 unread”	zero, many, error
Tabs (My Activity)	URL-synced, keyboard arrow navigation, `role="tablist"`	—
Modal / confirm	Title states the action, body states the consequence, primary = the action, focus trapped, Esc closes	Danger variant for suspend/reject/founded
Empty state	Illustration/icon, one sentence, one CTA (e.g. “Create your first listing”)	—
Toast / inline alert	Success auto-dismiss 4–6 s; errors persist until dismissed; `aria-live="polite"`	—

Icons: one set only (Lucide recommended), line style, 20–24 px, always with a text label or `aria-label`.

5. UX Patterns and Copy

- **Primary action dominance**: one primary button per view. On rental listing detail it is “Request booking”; on the review queue it is the decision buttons.
- **Prevent errors**: disable submit with an explanation instead of failing after submit; validate on blur, re-validate on submit.
- **Progressive disclosure**: multi-step Create Listing with a progress indicator; keep entered data when moving back.
- **Optimistic but honest**: show “Request sent — waiting for owner approval”, not “Booked”.
- **Never strand the user**: every success state names the next step (“Log your deposit reference after you pay the owner”).
- **Errors in plain language**: what happened + what to do (“Couldn’t upload photo 3. Check your connection and tap Retry.”). Never show raw Firebase error codes.
- **Real content length** in designs: Filipino addresses and peso amounts (₱25,000/month), long titles, many photos.
- **Language**: English UI, short sentences; avoid legal jargon; keep disclaimers one sentence long with a link to the full legal page.

Situation	Required copy (or equivalent)
Verification badge tooltip	“Our team checked that the owner’s ID matches an ownership document. This is not a legal title search.”
Deposit field	“Pay the owner directly only after your booking is confirmed. TrustHome does not hold or refund payments.”
Loan estimate	“Estimate only — not a loan offer or approval.”
Approximate map	“Approximate location. The exact address is shared after your booking is confirmed.” (only once address handoff works; until then: “Ask the owner for the exact address after confirmation.”)
Founded dispute flag	“1 founded dispute” with a link explaining what that means
Bank catalog	“Listings gathered from public bank websites. Last seen <date>. Confirm details with the bank.”

6. Accessibility (WCAG 2.2 AA target)

- Contrast: text ≥ 4.5:1 (large text ≥ 3:1); UI component boundaries and focus indicators ≥ 3:1.
- Never convey status by color alone — always text/icon too.
- Keyboard: all actions reachable with Tab/Shift+Tab/Enter/Space/Esc; logical order; visible focus ring (never `outline: none` without a replacement); skip link to main content.
- Targets: at least 24×24 px (WCAG 2.2 minimum), **44×44 px** recommended for primary touch targets.
- Semantics: native `button`, `a`, `label`, `fieldset/legend`; one `h1` per page; landmarks (`header`, `nav`, `main`).
- Forms: programmatic labels, errors linked with `aria-describedby`, `aria-invalid` on invalid fields, error summary on submit for long forms.
- Dynamic updates (booking status, uploads, toasts) announced via `aria-live`.
- Images: descriptive alt text for property photos (“Living room with sofa and two windows”), empty alt for decorative images.
- Respect user settings: Larger text (rem scaling, no fixed heights that clip), High contrast, Reduce motion / `prefers-reduced-motion`, `prefers-color-scheme` in System mode.

- Test with Lighthouse/axe, keyboard-only walkthrough, and a screen reader (NVDA or VoiceOver) on the key flows before release.

7. Designing New Pages

1. Add the page to the inventory table above with route, purpose and key UX requirement.
2. Low-fidelity first (grayscale boxes, real-length content, annotated interactions, empty and full states) and review with the team in 15–20 minutes.
3. High-fidelity with the tokens above; design all states (loading, empty, error, success, disabled).
4. Check accessibility and both themes before handing to development.
5. When prompting an AI design/code tool, include: page name and purpose, fidelity level, the token tables (3.1–3.4), the key UX requirement, and “WCAG 2.2 AA; status never color-only; all button states”.

BEST PRACTICE · **Design review checklist**

- Same nav, same primary-action position, same chip styles as existing pages.
- Verified badge and trust score visible without scrolling on listing views.
- No private data (address, documents) on any public or list view.
- Works at 360 px width and with Larger text on; dark mode checked.
- Copy follows §5 and does not over-claim.
