TrustHome PH

Project Overview & Scope

What TrustHome PH is today, who does what, what is (and is not) working, and how the nine reference documents fit together.

Document	TH-01 · Project Overview & Scope
Version / date	Rev. 2.0 · 4 October 2026
Factual baseline	TrustHome_Current_Progress_Report_2026-10-04.md (PR #42 `fixes` working copy, based on `features/v1-3-navigation-settings`; excludes `dev`)
Replaces	README + Build Instructions §1, §7
Audience	Team Idle developers, Scrum Master, QA, panel/adviser reviewers, and AI coding assistants used by the team

Evidence label	Meaning (never use these interchangeably)
[Implemented in source]	Code exists in the repository working copy. Not proof that it runs in production.
[Unit/emulator tested]	Covered by automated unit tests or the Firestore emulator suite.
[Reported working]	A team member observed it working in the browser against the test project.
[Deployed/live verified]	Deployed to trusthome-ph and confirmed working there.
[Known gap]	Does not yet meet the product claim. Do not present it as working.
[Roadmap] / **[Proposed]**	Planned future work / a recommendation in this document, not yet built.

1. Purpose of This Document Set

The earlier references (Build Instructions, System Build Plan, Firebase Setup Plan, Design Guide, Versioning Plan) were written in September 2026 for a 4-week MVP. The system has since moved on: booking approval runs as a Firestore client transaction, verification documents live in a private collection, admin notifications are split from user notifications, the bank scraper was promoted to v2, a Settings page and My Activity hub were added, and Saved Searches was retired. Several old statements are now wrong (for example "the first confirmed booking wins atomically", "a daily Cloud Function auto-completes bookings", "BDO/Landbank/Metrobank are scraped").

This set replaces all five PDFs with nine topic-based documents. Every factual statement is aligned to the **Current Progress Report of 2026-10-04**. Where the old plans described something that is not yet true, it is either moved to the roadmap or explicitly flagged as a known gap.

> **RULE · How to read every TrustHome document**
>
> - Treat the progress report and the source code as the truth. If a PDF and the code disagree, the code wins and the PDF must be corrected in the same pull request.
> - Every feature claim carries one evidence label (see the legend on the cover). "Implemented in source", "unit/emulator tested", "reported working" and "deployed/live verified" are four different things.
> - Never describe a **[Known gap]** or **[Roadmap]** item as working in the UI copy, the defense, or a status report.

1.1 Document map (old → new)

#	New document	Covers	Replaces
01	Project Overview & Scope	Product, roles, team ownership, current status, scope limits, document map	README + Build Instructions §1, §7
02	System Architecture & Data Model	Tech stack, components, routes, Firestore collections, access boundary, indexes	System Build Plan §0–2
03	Functional Specification & Business Rules	Listing intake, verification, booking state machine, deposits, disputes, trust score, notifications, bank catalog, loan estimate	Build Instructions §2–6 + System Build Plan §3–8
04	Firebase, Cloudinary & Security Setup	Project setup, Auth, Firestore rules, Cloudinary, secrets, Functions/Blaze, security hardening	Firebase Setup Plan
05	Development, Build & Deployment Guide	Local setup, scripts, Git workflow, coding standards, deployment runbooks, release gate	README Getting Started + Firebase Setup §8, §12
06	Bank Catalog Scraper & Data Operations	Scraper sources, jobs, GitHub Actions, backup/restore, migrations, scheduled maintenance	System Build Plan §7 + new v2 tooling
07	UI/UX Design System & Page Inventory	Current page inventory, design tokens, components, states, accessibility, settings	Design Guide
08	QA & Testing Strategy	Test levels, evidence rules, workbook usage, critical scenarios, defect handling	New (was spread across plans)
09	Release Roadmap & Versioning Plan	Version history, remaining release gates, ownership, branching and release practices	Versioning Plan

BEST PRACTICE · Keeping documentation current

- Store the PDFs' source (these generator scripts or Markdown) in `docs/` next to the code, so a docs change can be reviewed in the same PR as the code change.
- Add a "Docs updated?" checkbox to the PR template. Any change to a route, collection, rule, status value or formula must update TH-02/TH-03.
- Date-stamp each revision and keep one progress report per milestone; never edit an old report in place.
- Update the README "Documentation Index" table to the nine new file names when these PDFs are committed.

2. Product Summary

TrustHome PH is a responsive React web application for the Philippine rental market. It replaces informal channels (Facebook groups, chat referrals) with **document-reviewed listings**, a **calendar-based booking workflow**, a **Trust & Fairness Score**, and a **public dispute/accountability trail**. A separate, read-only **bank-acquired property catalog** lets buyers browse foreclosed properties scraped from bank websites, with a loan-payment estimator.

2.1 Problem and value proposition

Problem in informal channels	TrustHome response	Honest limit
Fake or duplicated listings; no proof the poster owns the property	Owner uploads an ownership document and a government photo ID; an admin reviews them before the listing is public	Plausibility review only — not a Registry of Deeds title search
Deposit scams: owner takes a reservation fee and disappears	Renter logs the deposit transaction reference on a confirmed booking; disputes are reviewed and founded disputes are counted publicly	TrustHome never holds money and cannot guarantee recovery
Double-booking of the same unit	Owners approve requests against an availability grid with a confirmed-date overlap check	Overlap check is not yet race-safe under simultaneous approvals **[Known gap]**
Listings ranked by recency or price, not reliability	Trust & Fairness Score: 40% booking history, 40% ratings, 20% price fairness	Needs enough completed bookings and comparables to be meaningful
Bank foreclosures are scattered across bank sites	Curated, regularly refreshed catalog with "last seen" dates	Metrobank is the only active source; this is a public scrape, not a bank partnership

2.2 Roles

There are only two account roles: `user` and `admin`. A user can be a renter, a homeowner, or both — there is no role picker. Access is decided by **ownership of a record** (am I the listing owner? the booking renter?) plus the `role` and `status` fields on `users/{uid}`.

Actor	Can do	Cannot do
Public visitor (signed out)	Browse verified listings; filter by purpose and property details; view listing detail, approximate map area, trust information and public profiles; search the bank catalog; use the loan estimator; read legal pages	See pending/rejected listings, exact addresses, documents, or anyone's bookings; request bookings

Actor	Can do	Cannot do
Signed-in user	Manage account and appearance/accessibility settings; create, edit and track own listings; request bookings on verified *rental* listings; as owner, approve or decline requests; save a deposit reference; mark own stay completed; rate; raise an eligible dispute; read own notifications	Approve own listing; change own role/status; read other users' private data; book a sale listing
Administrator (`role: admin`, `status: active`)	Review pending listings and their documents; approve, request changes or reject; resolve disputes (Founded/Dismissed); manage users; view dashboard counts; read admin notifications; queue bank-catalog refresh jobs; admin Settings	Bypass Firestore rules from the browser; write trust scores or bank properties directly (trusted Python jobs do that)
Trusted automation (Admin SDK)	Scrape the bank catalog, complete expired bookings, recompute trust scores, process admin-queued scraper jobs, backup/restore	Run with credentials committed to Git

3. Team and Module Ownership

Member	Role	Owned modules	Primary source files
Andresa, Rev Andrei	Scrum Master	Auth & user roles, route guards, admin dashboard, user management, admin notifications, Settings	`src/context/AuthContext.jsx`, `src/routes/`, `src/admin/`
Carillo, Christopher Andrei	Developer	Listing management, verified listing intake, private listing data, owner dashboard, My Listings	`CreateListing.jsx`, `EditListing.jsx`, `lib/listingValidation.js`
Laurente, Vien Melvic	Developer	Search & browse, booking request/approval calendar, My Bookings, disputes & accountability trail	`BookingRequest(s).jsx`, `MyBookings.jsx`, `RaiseDispute.jsx`, `lib/booking.js`, `lib/dispute.js`
Prades, Justine James	Developer	Ratings & reviews, Trust & Fairness Score (JS and Python parity)	`lib/trustScore.js`, `bank_scraper/trust_scores.py`
Solpico, Robert	Developer	Bank-acquired catalog, scraper & jobs, loan calculator, public profile	`bank_scraper/`, `.github/workflows/scrape.yml`, bank catalog pages

BEST PRACTICE · **Ownership practices**

- One owner per module, but every PR is reviewed by someone else. Security rules and booking logic need two reviewers.
- Cross-module schema changes (a new field on `bookings`, a new status) are announced in the daily stand-up before coding, then recorded in TH-02.
- The module owner keeps that module's rows in the test-case workbook current.

4. Current Status at a Glance (4 Oct 2026)

Area	State	Evidence / caveat
Web app	React 19 + Vite SPA with public, signed-in and admin route trees	**[Implemented in source]** **[Unit/emulator tested]** 48 Node tests, lint and production build passed in the previous fresh run
Identity	Email/password and Google sign-in; profile-backed role/status; fail-closed admin guard	**[Implemented in source]** **[Unit/emulator tested]**
Marketplace	Listing create/edit, pending review, verified-only public browse	**[Reported working]** create + admin review reported working
Booking	Renter request, owner approval via Firestore transaction (no Cloud Function needed)	**[Reported working]** approval reported working; **[Known gap]** concurrent-approval race; **[Known gap]** exact address not copied to booking
Trust & disputes	Ratings, trust/fairness calculation, dispute submission and admin resolution	**[Unit/emulator tested]** unit tests; full live permission matrix still needed
Bank catalog	Metrobank active; Landbank parser unverified; BDO placeholder	**[Implemented in source]** **[Unit/emulator tested]** 28 Python tests; no live benchmark
Firestore rules	Owner-approval path and access boundaries in source	**[Unit/emulator tested]** 9 emulator tests passed; **[Deployed/live verified]** rules deployment reported successful 2026-10-04
Hosting	Firebase Hosting configured	Last deployment 2026-10-01; current fixes branch **not** verified deployed
Cloud Functions	Callable confirmation + scheduled jobs exist in `functions/`	**[Implemented in source]** only — not deployed (Blaze/Cloud Build requirement)
Cloudinary	Unsigned `trusthome_uploads` preset accepts uploads	**[Known gap]** PDF delivery blocked: `show_original_customer_untrusted`; URLs are not private
Scraper package	v2 promoted to canonical `bank_scraper/`	**[Unit/emulator tested]** same scraping algorithm, adds backup/restore/migration tooling

KNOWN GAP · Release blockers (P0)

- **Verification-document delivery** — Cloudinary blocks PDF delivery for the account, and the unsigned upload URLs are publicly fetchable. Fix through secure, short-lived delivery (TH-04 §6). Never “fix” previews by making IDs public.
- **Booking guarantees** — overlap check runs before the transaction, so two approvals can race; the confirmed booking does not receive the private address. Choose one of the fixes in TH-03 §4.6 or narrow the demo claim.

5. Scope

5.1 In scope for the capstone release

- Account access (email/password, Google), profile, appearance and accessibility settings.
- Listing intake for rent **and** sale purposes, admin document review, verified-only publication.
- Approximate map location (coarse geohash) with exact address kept private.
- Booking request, owner approve/decline, deposit reference, renter completion, ratings, disputes.
- Trust & Fairness Score with anti-gaming flag; public profiles with founded-dispute count.
- In-app notifications (user feeds + admin broadcast feed).
- Bank-acquired catalog (Metrobank) with filters, pagination and loan estimate; admin-queued refresh.
- Admin dashboard, listing review queue, dispute queue, user management, admin notifications, admin settings.

5.2 Out of scope / roadmap

Item	Status	Why
Payments, escrow or deposit custody	**[Roadmap]** out of scope	Regulatory burden; the accountability trail is the defended design
Saved searches & paid alerts	Retired	`/saved-searches` redirects to Browse; old records are kept, not deleted
BDO source; Landbank activation	**[Roadmap]**	BDO is a placeholder; Landbank selectors need live validation
Deployed Cloud Functions (callable approval, daily jobs)	**[Roadmap]**	Requires Blaze plan and Cloud Build
Secure document delivery (authenticated assets + signed URLs)	**[Roadmap]** P0	Needs a trusted backend to sign URLs
Native mobile app (React Native)	**[Roadmap]** future phase	Web app is mobile-first responsive
Legal title search, e-KYC/OCR	Not planned	Manual plausibility review is a deliberate, explainable choice

5.3 Disclosed limitations (say these plainly to the panel)

- Document review filters casual fraud; it is **not** a legal title verification.
- TrustHome does not custody deposits; protection comes from the public dispute trail and account suspension.
- The bank catalog depends on mapped scraper sources and scheduled refreshes; only Metrobank is live.
- Loan results are **estimates**, not bank offers or approvals.
- Uploaded documents are handled in Cloudinary, not Firebase Storage; delivery privacy is a known gap until the secure path ships.
- Privacy notices, retention/account deletion and accessibility have been drafted for a student project; they are not legal advice.

6. Glossary

Term	Meaning in TrustHome
Listing	An owner-submitted property in `listings/{id}` (purpose: rent or sale). Distinct from a bank property.
Bank property	A scraped record in `bankProperties/{bank_reference}`. Read-only, never bookable.
Verification status	`pending` → `verified` / `changes_requested` / `rejected` (exact stored values: see `firestore.rules`).
Booking status	`Pending`, `Confirmed`, `Completed`, `Disputed`. Declined requests are removed, not set to Cancelled.
listingPrivate	Owner/admin-only document holding the exact address and verification document references.
Founded dispute	Admin decision that the reporter's complaint is valid; increments `publicAccountability/{ownerUid}`.
Trust score	Cached 0–1 score in `trustScores/{listingId}`, displayed on a 5-point scale with a plain-language cue.
Price fairness	Listing price per m² vs. the median of comparable verified rentals: Above / At / Below market / Insufficient data.
`__admins__`	Recipient ID used for admin broadcast notifications (listing submissions, disputes).
Admin SDK credential	Service-account key that bypasses rules. Only for trusted Python jobs; never in Git, PDFs, screenshots or logs.
